Lucas Luis Borges

Senior AI Engineer | TypeScript, React, Node.js, AI Agents

RAG, LangGraph.js, Python, PostgreSQL, AWS, Docker

PROFESSIONAL SUMMARY

Senior AI Engineer with 5+ years of Full Stack experience in TypeScript, React, Node.js and PostgreSQL, now building production AI agents, LLM pipelines and RAG. Led the rewrite of an AI platform where agents analyze production incidents and open fix pull requests. Previously shipped 15+ enterprise SaaS platforms supporting 30K+ monthly transactions and 200+ concurrent users. Experience across IT services, fintech, B2B SaaS, telecom and public sector projects. Looking for remote Senior AI Engineer or Senior Full Stack Engineer roles.

EXPERIENCE

Senior AI Engineer | Cadmus Soluções em TI · *Brazil · May 2026 – Present*

IT services and consulting company · 1,000–5,000 employees

- Led the rewrite of Aura, an AI platform that analyzes production incidents and opens fix pull requests, from .NET to a TypeScript monorepo (Bun, React 19, Hono, Drizzle, PostgreSQL + pgvector, Redis Streams), authoring ~75% of the new version's commits; now in use by ~10 internal users.
- Built the AI agent pipeline: groups production logs into incidents, classifies them with an LLM and runs a Codex/Claude agent orchestrated with LangGraph.js in an isolated Docker container (Python runner) that fixes the code, reviews its own fix and opens a draft pull request, using project context retrieved via RAG.
- Added security and cost controls for the agents: encrypted per-client credentials with audit trail for GitHub, GitLab and Azure DevOps, masking of secrets and personal data in agent logs, rate limiting and AI spending limits per project.
- Led pre-release acceptance testing (UAT) with 991/991 automated tests passing and 23 Docker integration tests, catching 5 critical issues before the client release.
- On AI Hub, a multi-tenant workspace for AI agents and RAG built on OpenWebUI (React, Fastify, DynamoDB, Terraform), implemented 6-role access control (RBAC), an n8n-style visual builder for autonomous agents and AI usage and license dashboards.

Full Stack Software Engineer | Cadmus Soluções em TI · *Brazil · Jan 2026 – May 2026*

Fintech project: consumer credit platform.

- Built a credit platform integrated with QiTech (banking-as-a-service) and Wellhub (corporate wellness), covering signup, credit analysis, partners, sessions and status tracking, with React, Next.js, NestJS, PostgreSQL and TypeScript.
- Implemented identity verification with facial recognition and document scanning in the credit approval flow.
- Built Rust Backend-for-Frontend (BFF) services to orchestrate APIs and covered the application with automated Jest tests.

Full Stack Software Engineer | TD Business · *Brazil · Sep 2022 – Dec 2025*

Business management consulting firm · 11–50 employees · clients include Sebrae and the Brazilian Space Agency

- Shipped 15+ enterprise SaaS platforms supporting 30K+ monthly transactions and 200+ concurrent users: multi-tenant CRM, analytics, infrastructure provisioning, chatbot and WhatsApp/Telegram integrations with Next.js, PostgreSQL and Redis.
- Reduced analytics dashboard response time from 3.2s to 1.2s by optimizing SQL queries in PostgreSQL and adding Redis caching for high-traffic views.

- Reduced SaaS environment setup from 4 hours to 3 minutes by automating GitHub repository creation, Neon PostgreSQL provisioning and Vercel deployments through Next.js Server Actions.
- Reduced deployment time from 45 minutes to 8 minutes and increased releases from 1 to 3-4 per week by optimizing CI/CD pipelines with GitHub Actions and Docker.
- Mentored 3 junior developers through code reviews, ESLint/Prettier standards, Conventional Commits and Clean Architecture practices.

Frontend / Full Stack Engineer | Freelance · *Brazil · Feb 2022 – Nov 2024*
Part-time freelance work alongside full-time roles.

- Built internal dashboards and client web applications with React, Next.js and TypeScript connected to REST APIs.

Frontend Engineer | Khomp · *Brazil · Aug 2021 – Jan 2022*
Telecom and IoT technology company · 201–500 employees · Internship

- Developed internal mobile applications with React Native and TypeScript, integrated with REST APIs and authentication.

SELECTED PROJECTS

- **Sebrae Startups Observatory (TD Business):** Built a PT/EN/ES analytics platform for Sebrae, Brazil's national small-business support agency, processing 20K+ startups through BigQuery, with geospatial maps, advanced filters and next-intl internationalization.
- **AEB Internal Dashboard (TD Business):** Centralized corporate BI access for the Brazilian Space Agency in 1 internal platform with Azure AD SSO, hierarchical dashboards, granular RBAC and administrative audit trails.

SKILLS

AI & LLM: Generative AI, LLMs, AI agents, RAG, embeddings, prompt engineering, guardrails, LangChain, LangGraph.js, Vercel AI SDK, OpenAI API, Anthropic Claude, Codex/Claude CLI, MCP servers, OpenWebUI.
Programming Languages: TypeScript, JavaScript, Python, SQL, Rust, HTML5, CSS3.
Front End: React 19, Next.js (App Router), React Native, TanStack Router/Query, TailwindCSS, shadcn/ui.
Back End: Node.js, Bun, NestJS, Fastify, Express, Hono, REST/OpenAPI, Prisma, Drizzle, OAuth2, RBAC.
Databases: PostgreSQL, pgvector, Redis, DynamoDB, BigQuery.
Cloud & DevOps: AWS (EC2, S3, CloudFront), Terraform, Docker, Git, GitHub Actions, GitLab CI, CI/CD, Vercel.
Testing & Practices: Jest, Vitest, Playwright, Clean Architecture, code review.

EDUCATION

Undergraduate Technologist Degree (Tecnólogo) in Systems Analysis and Development | Faculdade Cesusc · *Brazil · Dec 2022*
Relevant courses: Node.js + TypeScript + Express + Prisma + Swagger; Python; Cloud DevOps Workshop.
