SUMMARY OF QUALIFICATIONS

Senior AI Engineer with 5+ years of Full Stack experience in TypeScript, React, Node.js and PostgreSQL. At Cadmus, I led the rewrite of Aura, an autonomous AMS platform where AI agents analyze production incidents and open fix Pull Requests, and I build AI Hub, a multi-tenant corporate workspace for AI agents and RAG. Previously shipped 15+ enterprise SaaS platforms (multi-tenant CRMs, analytics dashboards, automated provisioning and chatbots) supporting 30K+ monthly transactions and 200+ concurrent users.

TECHNICAL SKILLS

AI/LLM: AI agents, LangGraph.js, Vercel AI SDK, OpenAI, Anthropic Claude, Codex/Claude CLI, RAG with pgvector, OpenWebUI, guardrails. **Frontend:** React 19, Next.js App Router, TanStack Router/Query, React Native, TypeScript, TailwindCSS, shadcn/ui, React Flow, Recharts. **Backend:** Node.js, Bun, Hono, oRPC, NestJS, Fastify, Express, .NET, Python, Rust (BFF), REST/OpenAPI, Drizzle, Prisma, Better Auth, OAuth2, RBAC. **Data/Cloud:** PostgreSQL, pgvector, Redis Streams, DynamoDB, BigQuery, AWS (EC2, S3, CloudFront), Terraform, Docker, GitLab CI, GitHub Actions, Vercel. **Quality:** Bun test, Vitest, Jest, Playwright, Cypress, TDD, DDD, code review, Scrum/Kanban.

EXPERIENCE

Senior AI Engineer - Cadmus Solucoes em TI May 2026 - Present

- Led the rewrite of Aura (AI-driven autonomous AMS) from .NET to a TypeScript monorepo (Bun, React 19, Hono, oRPC, Drizzle, PostgreSQL + pgvector, Redis Streams), authoring ~75% of V2 commits.
- Built the agent pipeline: incidents grouped from production logs and classified by an LLM, LangGraph.js orchestration and a Codex/Claude agent in an ephemeral Docker container that fixes, self-reviews and opens a Draft PR.
- Integrated GitHub, GitLab and Azure DevOps with encrypted credentials (AES-256-GCM), per-tenant rotation and audit trail, and automated replies to code review comments on PRs via webhooks.
- Implemented AI guardrails and governance: masking secrets and personal data in agent logs, credential blocking, SSRF protection, rate limiting and atomic AI cost quotas per workspace and project.
- Created the Demands flow (scope, estimate, Codex planning and implementation), project skills injected into prompts via RAG, and auto-fix routing across projects in the same group.
- Ran the platform homologation with 991/991 tests and 23 Docker runner integration tests, catching 5 critical issues before the client release.
- On AI Hub (agents and RAG on top of OpenWebUI; React, Fastify, DynamoDB, Terraform), implemented multi-tenancy with 6-role RBAC, an n8n-style visual builder for autonomous agents, and AI usage and license dashboards.

Full Stack Developer - Cadmus Solucoes em TI Jan 2026 - May 2026

- Developed a credit platform with direct QiTech and Wellhub integrations (signup, credit analysis, partners, sessions and status control) using React, Next.js, NestJS, PostgreSQL and TypeScript.
- Implemented identity verification with facial recognition and document reading in the credit approval process.
- Built Rust Backend for Frontend services for API orchestration and covered the application with automated Jest tests.

Full Stack Developer - TDBUSINESS Sep 2022 - Dec 2025

- Shipped enterprise SaaS platforms for 200+ users: multi-tenant CRM, analytics, infrastructure provisioning, chatbot and WhatsApp/Telegram integrations with Next.js, PostgreSQL and Redis.
- Reduced analytical dashboard response time from 3.2s to 1.2s by optimizing PostgreSQL queries and introducing Redis caching for high-traffic data views.
- Reduced SaaS environment setup from 4 hours to 3 minutes by automating GitHub repository creation, Neon PostgreSQL provisioning and Vercel deployments through Next.js Server Actions.
- Reduced deployment time from 45 minutes to 8 minutes and increased releases from 1 to 3-4 per week by optimizing CI/CD pipelines with GitHub Actions and Docker.
- Improved engineering quality by mentoring 3 junior developers through code reviews, ESLint/Prettier standards, Conventional Commits and Clean Architecture practices.

Frontend / Full Stack Developer - Freelancer Feb 2022 - Nov 2024

- Built internal dashboards and client web applications with React, Next.js and TypeScript connected to REST APIs.

Frontend Developer - Khomp Aug 2021 - Jan 2022

- Developed internal mobile applications with React Native and TypeScript, integrated with REST APIs and authentication.

SELECTED PROJECTS

- **Sebrae Startup Observatory:** Built a PT/EN/ES analytics platform processing 20K+ startups through BigQuery, geospatial maps, advanced filters and next-intl internationalization.
- **AEB Internal Dashboard:** Centralized corporate BI access for the Brazilian Space Agency in 1 internal platform with Azure AD SSO, hierarchical dashboards, granular RBAC and administrative audit trails.

EDUCATION, CERTIFICATIONS & LANGUAGES

Systems Analysis and Development - Faculdade Cesusc, Jan 2020 - Dec 2022. Practical projects in React, Next.js, Docker, cloud deployment, agile methods and full stack architecture.

Courses: Node.js + TypeScript + Express + Prisma + Swagger; Modern JavaScript; Spring; Spring Boot; Java; Python; Cloud DevOps Workshop.

Languages: Portuguese native; English technical/intermediate (B1).
